1

"Operation Chaos received ers the various modes of cable materials from an international or written communications, nor communications activity of another agency of the Government agency has the other agency and received a total of approximately 1,100 pages of materials over all."

According to sources familiar with the N.S.A.'s operations, they are made possible by its "extraordinary" computer technology, which permits the sifting of millions of messages. Though there is no public total calculation of how many messages are transmitted in and out of the United States a year, in one communication trategory alone transoceanic.

billions of words."

The exact technology of the operation is a closely guarded secret, but sever al sources sait was effected by programing the computer to look for "trier words." The computer scans the message traffic and automatically selects for recording any message that contains the words it has been programed to watch for.
